## THE JOHNS HOPKINS UNIVERSITY SCHOOL OF HYGIENE AND PUBLIC HEALTH 615 NORTH WOLFE STREET

DEPARTMENT OF BIOCHEMIST

mar 21, 1960

Dear Josh; In reflecting on the unique tie between cells and DNA I was slower by the passible evolutionary implications for a common origini of cells. If the isture I haven't found any one who has said so and if I suit so why not? What is the flow in my reasoning? You wice reading probably comied you to discussions I haven't seen. Can you recall any comment on such a thought? The RNa virus only recurforce the notion for they show that other brokenical coding schemes exist and yet in the wide Vainety of Systems analyzed thus four only DrA with - in several the same four bases - is the primary hereditary method. If a number of cells arose independently one might expect them to have different systems of biochemical coding. Is this well known or morest?

We are getting some interating things which I would like to talk over with you when our paths cross - Bertregards! Roger
